Carbon footprint 2020 (Scope 1&2)

22,2 (t CO₂e/\$M Sales)

% of portfolio with CO2 reduction targets

50,8 %

The fund excludes the following industries:

Max 5% of the turnover can be derived from the excluded sector.
Controversial weapons, Weapons, Nuclear power, Tobacco, Alcohol, Gambling, Pornography, Coal, Uranium, GMO, Fossil fuels, UN Global Compact breaches

Environmental Certificates

The investment process has been audited by a 3rd party. Read more about the Austrian Ecolabel here: <https://www.umweltzeichen.at/en/products/start>

ESG Approach

Fondita 2000+ is a global fund which invests in companies that are well positioned relative to the three themes of the fund. The themes are Environmental challenges, Ageing Population and Digitalization. In addition to the environmentally focused thematic approach the investment process includes both qualitative and quantitative sustainability factors for all holdings. The fund excludes companies with exposure to sectors we perceive as unsustainable or unethical, as well as companies that have severe UN Global Compact breaches. If issues arise regarding ESG we engage through direct dialogue with management. If issues are not properly addressed, we divest the holding.

Portfolio alignment with UN sustainable development goals (SDG)

83,0 % of portfolio covered by data

Operational		Product

Current Environmental Certificates

The fund has 1 environmental certificate, the Austrian Ecolabel. The fund needs to fulfil certain sustainability related requirements in the investment process, transparency and consequently the holdings, to maintain these certificates. The fund is audited annually based on the requirements of the certificates.

The Austrian Eco-label:

The Austrian Eco-label for Sustainable Investment Funds is awarded to investment products that comply with the criteria provided in the Eco-label Guideline. The Eco-label certifies ethically oriented projects and companies that generate profits through sustainable investments. Sustainability-themed funds (local and international) can apply for the label.

SFDR-Classification

SFDR aims to increase transparency on how financial market participants integrate sustainability into their investment decisions and recommendations. It introduces a classification system with new disclosure requirements for investment products.

Dark Green (Article 9) – The fund has sustainability as their objective.

Light Green (Article 8) – The fund promotes environmental or social characteristics, or a combination.

Grey (Article 6) – Funds which do not integrate any kind of sustainability into the investment process.

MSCI ESG Rating

MSCI assesses thousands of datapoints across 35 ESG Key Issues, focusing on the intersection between a company's core business and the industry issues that can create significant risks and opportunities for the company. Companies are rated on a AAA-CCC scale relative to the standards and performance of their peers. Issue scores and weights combine to overall ESG rating. E, S and G scores are also calculated separately.

Carbon Reduction Targets

This number indicated the percentage of holdings that have a set carbon reduction target as opposed to holdings with no set target. The targets can naturally be very different in terms of aggressiveness. The data is based on MSCI's ESG database.

Carbon Metrics

MSCI ESG Research collects carbon emissions data for the companies in the coverage universe. Data is collected once per year from most recent sources, including annual reports, Corporate Social Responsibility reports or websites. In addition, MSCI ESG Research uses the carbon emissions data reported through CDP (formerly the Carbon Disclosure Project) or government databases when reported data is not available through direct corporate disclosure. When companies do not disclose data, MSCI ESG Research uses proprietary methodologies to estimate emissions.

Carbon Intensity – Carbon Intensity measures the carbon

efficiency of a company as total carbon emissions normalized by total sales. At a portfolio level, carbon intensity is the ratio of portfolio carbon emissions normalized by the investor's claims on sales. This method expresses portfolio carbon efficiency and allows investors to know how many emissions per dollar of sales are generated from their investment.

The Carbon Intensity data is based on Scope 1&2 emissions.

Scope 1 – All Direct Emissions from the activities of an organisation or under their control. Including fuel combustion on site such as gas boilers, fleet vehicles and air-conditioning leaks.

Scope 2 – Indirect Emissions from electricity purchased and used by the organisation. Emissions are created during the production of the energy and eventually used by the organisation.

Sustainable Impact Solutions – Revenue exposure to Sustainable Impact Solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major social and environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from Sustainable Impact Solutions.

Product related and operational SDG alignment of the fund

The MSCI SDG Alignment framework provides 17 SDG Net Alignment scores and 17 SDG Net Alignment assessments (including Strongly Aligned, Aligned, Neutral, Misaligned and Strongly Misaligned) for each of the 17 global goals. In addition, the model offers assessments and scores for two dimensions, product alignment and operation alignment, for each company and for each of the 17 goals.
